### President's Report

My Dear College Members,

Time really flies and we are now in the Annual General Meeting of 2018. May I take this opportunity to update you some of our College's major achievements in the first half year of 2018.

In meeting with the ever-challenging health care system and the complex community environment, we have invited Dr James LUK, the President of the Hong Kong Geriatrics Society, to be our Keynotes Speaker today and shared his foresight with us on "New Frontiers in Geriatric Care in Hong Kong" in our 2018 Annual Scientific Meeting. This year our Scientific Meeting has received an overwhelming response of approaching 100 participants. In the event, our Fellows and members will share their successful collaboration projects and excellent updates of their current nursing practice for "Building a Sustainable Quality Gerontological Healthcare".

We have also organized two "Journal Club" forums in the past 6 months. Each forum has covered different gerontological nursing professional in-depth practice issue and all were well received by our members.

During 2017 & 2018, we have also collaborated with the "廣東省護士協會" to organize their third and fourth Gerontology Nurse Specialist Certificate Training Course for the nursing colleagues of Guangdong province. Such Course was successfully held with more than 80 nurse specialist graduates each year. We are also planning to organize jointly for the "2018 Nursing Forum in Gerontological Care" between the 2 organizations in coming September, 2018 in Guangzhou, which will also celebrate the 10<sup>th</sup> Anniversary of the "廣東省護士香港培訓計劃 (老人科)".

May I also like to take this opportunity to send my deepest gratitude and thank all our devoted Council Members for their wholehearted support to the College and brilliant, outstanding contributions in past two years. Since the new 2018-2020 College Council was elected, I would like to wish them an every success and also bring our College to a new cutting edge of professionalism for Gerontology Nursing.

Thank you very much!

Anders YUEN President (2016-18), Hong Kong College of Gerontology Nursing 26<sup>th</sup> May, 2018.

Turning Patient: At The Right Time – A Hospital-wide Strategies in Ruttonjee and Tang Shiu Kin Hospitals (RTSKH)

PangSY<sup>1</sup>, Leung YP<sup>1</sup>, <u>Sabrina Ho</u><sup>2</sup>, Monica Ng<sup>1</sup>, Flora Mak<sup>2</sup>, Angela Lee<sup>3</sup>, Leung YL<sup>4</sup>, Harris Lam<sup>5</sup>, Pressure Injury & Wound Nursing Management Team, RTSKH

Department of Surgery & Orthropaedics, Ruttonjee and Tang Shiu Kin Hospitals <sup>1</sup> Department of Geriatrics, Ruttonjee and Tang Shiu Kin Hospitals <sup>2</sup>,

Department of Acute Integrated Medicine Services, Ruttonjee and Tang Shiu Kin Hospitals<sup>3</sup>,

Department of Respiratory Medicine, Ruttonjee and Tang Shiu Kin Hospitals<sup>4</sup>,

Nursing Service Division, Ruttonjee and Tang Shiu Kin Hospitals <sup>5</sup>.

Ms Sabrina HO

#### Introduction

In the aims to transform the evidence based nursing practices on patient turning and reduce pressure ulcer rate in RTSKH, a quality improvement program was initiated by Pressure Injury & Wound Nursing Management Team from June 2016 – June 2017.

#### **Objectives**

- 1. To implement turning schedule in all ward areas and standardize patient turning practices within hospital.
- 2. To strengthen the knowledge and skills of supporting staff on patient turnings and pressure injury prevention.

#### Methodology

The program was a conjoint program led by the nurse consultant of gerontology and wound nurse of RTSKH. It was implemented by phases from June 2016 to June 2017 in all clinical areas except ICU, EMW & Day Services Unit.

- Interventions
- A "Road Show" mode of training was adopted including theoretical teaching sessions & skill transfer workshops in each clinical areas to PCAs & HCAs. It introduced the use of turning schedule for patient turning to frontline staff and target to align turning practices according to the turning schedule in the whole hospital.
- 2. Program Evaluation:

Program evaluation including pre and post training knowledge test, Hospital-wide staff compliance audit on the use of "Turning Schedule" and staff satisfaction survey

#### Result

Twenty sessions of ward based training for supporting staff on "Prevention of Pressure Injury" & Introduction of "Turning Schedule" were run that covered 81 participants. An average score of 44 was increased to 90, with more than 2 folds improvement, after the training. In the compliance audit on the use of "Turning Schedule" which was carried out in September 2017, 358 patients' turning positions were checked. High overall compliance rate of 91.3% was achieved and among the 91 staffs (41 nurses & 50 supporting staffs) who performed the satisfaction survey, more than 87% gave positive feedback on the effectiveness of the turning schedule for prevention of pressure injury. Reasons for the 8.7% non-compliance were reviewed and staff feedback was collected for future improvement.

#### Conclusion

The turning schedule was well implemented within hospital with high compliance rate of 91%. It allowed flexibility of use in special conditions including contraindications and patient's preference. The "turning schedule" was mostly displayed in common area where staff could easily access. It was well accepted by most of the staff of the hospital as a convenient and useful tool in pressure injury prevention. Therefore, the pressure injury rate is keep at low level in RTSKH.

Congestive Heart Failure Reduction Program in Residential Care Home for Elderly

#### TSE LKD, YUNG YC, CHAN K, LEE HTJ, MAK PKF, KNG PLC

Community Geriatrics Assessment Team, Department of Geriatrics, Ruttonjee and Tang Shiu Kin Hospital

#### **Background**

Congestive heart failure was one of the common chronic conditions that increased the utilization of hospital services among elderly. In 2017, there was 302 elderly from Residential Care Home for Elderly (RCHE) had unplanned admission to PYNEH and RTSKH with diagnosis of Congestive Heart Failure (CHF). In addition 118 (39%) of them was unplanned readmission. Therefore, a "Congestive Heart Reduction Program" was conducted in RCHE.

#### **Objective**

- 1. Empowerment of RCHE staff in monitoring of signs and symptoms of elderly with CHF
- 2. Reduction of unplanned readmission as related to CHF

#### Method

CGAT doctor / VMO provided educational talk to RCHE staff to enhance their knowledge on the management of CHF. The post-discharged elderly with principle diagnosis of CHF would be assessed by CGAT nurses. The RCHE staff was advised to perform assessment according to the nurse instruction. CGAT nurses would perform weekly visits for 4 sequential weeks to monitor the conditions of the elderly.

If there was any abnormality detected, the RCHE staff should report to the CGAT nurses for further advices.

#### Result

- The study was conducted from Dec 2017 to Feb 2018
- RCHE training:
  - 5 RCHE with 45 staff were trained. A pre & post-test with 5 multiple choice quiz was done. In the pre-test, the average score of the respondents was 1.8. After the talk by CGAT doctors / VMO, the post-test average score was increased to 3.6.
- Patient Recruited
  - 22 patients were recruited included 16 female (72.7%) and 6 male (27.3%). The age of the patients ranged from 79 to 100 years old, their mean age was 89.6 years old. The bed days of the patients were ranged from 1-18 days with mean 5.33 days. The number of medical condition patients suffered was ranged from 1-8 conditions with mean 4.2. Besides, they also took 6-18 medications with mean 10.88 medications. In the New York Heart Association Classification (NYHA), there was 5 (22.72%) patients classified as class I, 10 (45.45%) class II and 6 (27.27%) patients classified as class III
- Provision of interventions
  - 5 patients was advised to have fluid restriction, lasix titration was provided to 4 patients, early following by VMO was arranged to 4 patients and clinical admission was arranged to 4 patients.
- Hospital service utilization
  - 7 patients out of these 22 patients were readmitted, there was 22% reduction of readmission rate with 58.8% reduction of total bed days.

#### Conclusion

The reduction of CHF readmission rate might be facilitated by two factors. Firstly, closely monitor the vital sign and body weight to detect the early warning signs of CHF. Secondly, increase the RCHE staff awareness on the importance of fluid restriction and good drug compliance, therefore, the risk factors were controlled.

Effect of a Theory-driven Educational-intervention for Improving Adherence to Inhalation Therapy in Patients with Chronic Obstructive Pulmonary Disease: A Pilot Study

#### To KW<sup>1</sup>, Lee FKI<sup>2</sup>

(1)Hong Kong Baptist Hospital, (2)The Nethersole School of Nursing, The Chinese University of Hong Kong

#### **Background**

Patients with chronic obstructive pulmonary disease (COPD) show poor adherence to inhalation therapy, thereby reducing the treatment effect. Information-motivation-behavioral (IMB) model is recommended as a theoretical framework for adherence intervention but the use of this model in patients with COPD has not been adequately evaluated.

Prof Iris LEE

#### **Objective**

The objectives were to evaluate the effect of an IMB model-based educational intervention on adherence to inhalation frequency and inhalation techniques.

#### Method

This study was a randomized controlled trial. The subjects were older people with COPD recruited from a specialist outpatient clinic of a public hospital in Hong Kong and randomized into intervention and control groups after

collection of informed written consents and baseline data. The intervention was an IMB model-based educational intervention which consisted of a one-hour face-to-face educational session and two telephone follow up sessions on the second and fourth weeks. The control was usual care. The intervention was conducted on the day of subject randomization. The adherence to the inhalation frequency was calculated by using the ratio of the number of doses taken to the number of doses prescribed. The adherence to inhalation techniques were assessed by the checklists designed by the National Asthma Council Australia in 2008. Data were collected before and six weeks after randomization. Regarding data analysis, a generalized estimating equations (GEE) model was used to assess the differential change of inhalation frequency and inhalation techniques.

#### **Results**

The final sample consisted of 15 intervention and 15 control subjects with a mean age of 75.7 years (SD = 4.8). There were not any significant differences in baseline socio-demographic and clinical characteristics between the intervention and control groups. No significant difference was found between the two groups in terms of medication adherence (p = 0.388) and inhalation techniques (p = 0.557) at baseline. Although the GEE model did not show a significant difference in the change of inhalation adherence across the two study time points between the two groups (B = 18.19, 95% CI: [-4.72, 41.10], p = 0.120), it showed a statistically significant difference in the change of inhalation techniques across the two study time points between the two groups (B = 15.57, 95% CI: 5.73, 25.42], p = 0.02) indicating that the intervention group had significantly greater improvements in their inhalation techniques compared with the control group.

#### Conclusion

The IMB model-based educational intervention could improve COPD patients' adherence to inhalation techniques but could not demonstrate a statistically significant effect on medication adherence.

Challenges of Engaging patients in Advance Care Planning in Hospital Care Setting: A Qualitative Study on the Experiences of Nurses

#### Cheng PPP<sup>1</sup>, Chan HYL<sup>2</sup>

(1) Central Nursing Division, Yan Chai Hospital; (2) The Nethersole School of Nursing. The Chinese University of Hong Kong.

#### Introduction

Advance Care Planning (ACP) is defined as a communication process among patient, family and healthcare providers about end-of-life (EOL)

before patients lose their capacity to decide their treatment plan. It has been much elaborated in detail and promulgated recently by Hospital Authority (HA). It highlights in relevant guidelines that advance care planning (ACP) should be promoted "as an integral part

of clinical care for patients with advanced progressive diseases". However, much attention has been focused on the clients' experiences with the ACP process; little is known

about the experiences of health professionals.

#### **Objectives**

It aimed to explore the enablers and barriers perceived by Nurses in the ACP process.

#### Methodology

- Qualitative exploratory approach was adopted to achieve the study objective. This is part of a 24-month stepped-wedge cluster randomized controlled trial study in Department of Medicine, which examines the effects of a structured ACP program in the hospital care setting.
- In Nov Dec 2017, 27 staff volunteers (5 WMs, 8 APNs & 14 RNs) are recruited from Department of Medicine and Central Nursing Division. They were trained as ACP facilitators to engage discussion about end-of-life care issues with patients who met the criteria of the Supportive and Palliative Care Indicators Tool (SPICT).
- Two focus group interviews were conducted to understand their experiences, with each last for around 60 minutes. Qualitative content analysis was used for analysis. All participation is on a voluntary basis with no obligation on official release. Ethics approval for the study was obtained from the KWC research ethics committee.

#### **Results and Outcomes**

- The findings showed that the participants generally realized the importance of ACP in preparing patients with advanced progressive diseases and their family members and the support from the hospital and the management level was imperative to recognize its value.
- From the participants' sharing, some patients who were aware of their deteriorating conditions welcomed the discussion for clarifying their care wishes. However, several barriers were identified in the process. While heavy clinical workload may deter them from approaching the patients, the lack of understanding from colleagues and family members were the major hindrances. Some patients worried that their family would not respect their choices and some doctors and nurses were unfamiliar with ACP.
- Therefore, more promulgation work is needed to promote the concept to hospital staffs across disciplines at all levels and thus enhances partnership with patients.

# 制訂完善「居家終者」政策

李國麟 立法會(衞生服務界)議員

生老病死是人生必經階段·少不免會經歷傷患、疾病·然而有不少病人·例如末期癌症病人、末期器官衰竭病人、年老病人·在其疾病已無法痊癒的階段、仍須承受不同程度的痛楚。

其實,隨着社會環境的變遷,大部分長者都希望「死得好」,在人生最後的階段在自己熟悉的環境,例如家中、院舍,按自己意願,舒服、有尊嚴地走完人生最後一段路。然而,現時香港在政策、法例、醫護人手及服務上都未有完善規劃,當局必須制訂清晰的善終政策,投放資源,加強教育,提供完善的善終服務。

所謂善終照顧,根據世界衞生組織的定義,是指針對治癒性治療無反應的末期病人提供積極性和全人化的照顧,以維護病人和家屬的最佳生命質素,例如醫生會以藥物及其他輔導方法盡可能地紓緩病人身體各種疼痛,專科護士和物理治療師等會教導症狀護理,社工提供離別輔導,並向病人及其家屬提供心理、社會和心靈的照顧,讓病人安詳地離去。

#### 培訓相關醫護團隊

奈何,現時香港的善終服務非常有限,主要由醫管局提供住院、門診、日間紓緩護理、家居護理服務和哀傷輔導;部分安老院舍和社區組織會自發提供不同類型的善終照顧服務,向公眾推廣生死教育和提供各類培訓課程。但這些服務都十分零碎,亦欠缺協調,服務的人次亦相當有限。因此,當局應投放資源,由中央協調,為市民提供相關資訊及協助,讓他們在有選擇的情況下,尋找適合自己的晚期生活照顧服務。

此外,在目前的法律框架下,在家善終並不容易,需要相關的紓緩服務的配套,以及由一位私家醫生為病人確診末期疾病及上門簽署死因證明書,在實際操作及法例上都有一定困難。

因此,當大部分年老的晚期病人出現不適或異常徵狀時,便慣性地把他送進醫院治理,有時因要延續其生命而施 行維生方法,例如插喉餵奶以補充營養,令本來已虛弱的長者繼續承受不適;有時為防止他們拔喉,更要穿上約 束衣,這些都令他們身心受創,晚期生活質素大受影響。

其實,現時已有不少國家或地區都有制定完善的善終政策,例如英國、澳洲、紐西蘭、台灣等;英國有完善的全國政策配合,讓臨終關懷融入國民的醫療健康服務體系,而台灣已於 2000 年立法施行臨終關懷條例,推行全面研究計劃,廣泛培訓護理人員,又提供紓緩治療及服務,控制和減少痛楚和困擾的病?,為臨終者提供適切、有尊嚴和優質的死前和死後支援服務,讓他們選擇在一個熟悉的環境,在親友陪伴下完成這條人生路。

本港亦應參考有關做法,因應我們的情況制定合適的政策。

筆者樂見上年《施政報告》提出研究制訂更完善的政策和法律框架,促進臨終護理服務的規劃建議,希望當局盡快制訂一套完善的「居家終老」政策,透過修改法例、加強社區紓緩治療服務、培訓相關的醫護團隊、教育公眾等,讓長者能夠真正「居家終老」。
